

1. *What is the purpose of the study?*  
 2. *What are the research questions or hypotheses?*  
 3. *What is the study design?*  
 4. *What is the sample size and how was it selected?*  
 5. *What are the variables being measured?*  
 6. *What are the data collection methods?*  
 7. *What are the results of the study?*  
 8. *What are the conclusions and implications of the study?*  
 9. *What are the limitations of the study?*  
 10. *What are the strengths of the study?*  
 11. *What are the future research directions?*  
 12. *What are the ethical considerations?*  
 13. *What are the funding sources?*  
 14. *What are the conflicts of interest?*  
 15. *What are the acknowledgments?*  
 16. *What are the references?*  
 17. *What are the appendices?*  
 18. *What are the footnotes?*  
 19. *What are the tables and figures?*  
 20. *What are the conclusions?*

Extensible Markup Language (XML) based data is used to share the discovery information of devices on a network over Internet transport. XML based search engines are used to search for the discovery information. Discovery information, such as identification, location, or capability data, for example, is stored on the devices of a network in the form of XML documents. Network topology maps may be created based on the information discovered.
